

Drone Mission Junior Rule

Drone Mission - Junior (Age 12 and Under)

Participant Eligibility

1. Each team consists of 1 competitor.
2. The competitor must be no older than 12 years. Age is calculated based on the year of birth relative to the competition year, B.E. 2569 (2026), without considering the month or day of birth. **Born in B.E. 2557 (2014) or later.*
3. One team controller/coach is permitted (or the team may compete without one).

Drone Requirements

1. Any size, brand, or model of **soccer drone** may be used, provided that the total weight does not exceed **120 g** (including the battery, excluding the remote controller).
2. The drone must be remotely controlled using a radio transmitter / remote controller.
3. **Any type of battery may be used, but the voltage and current information must be clearly labelled. Degraded batteries, batteries with faded or illegible labels, chemical leakage, or swelling are strictly prohibited from use in the competition.**
4. A spare drone is permitted. Any spare drone must be presented to the referee for inspection in advance.

Competition Rules

This is an **indoor** competition held in a netted field measuring approximately **4 x 8 meters**.

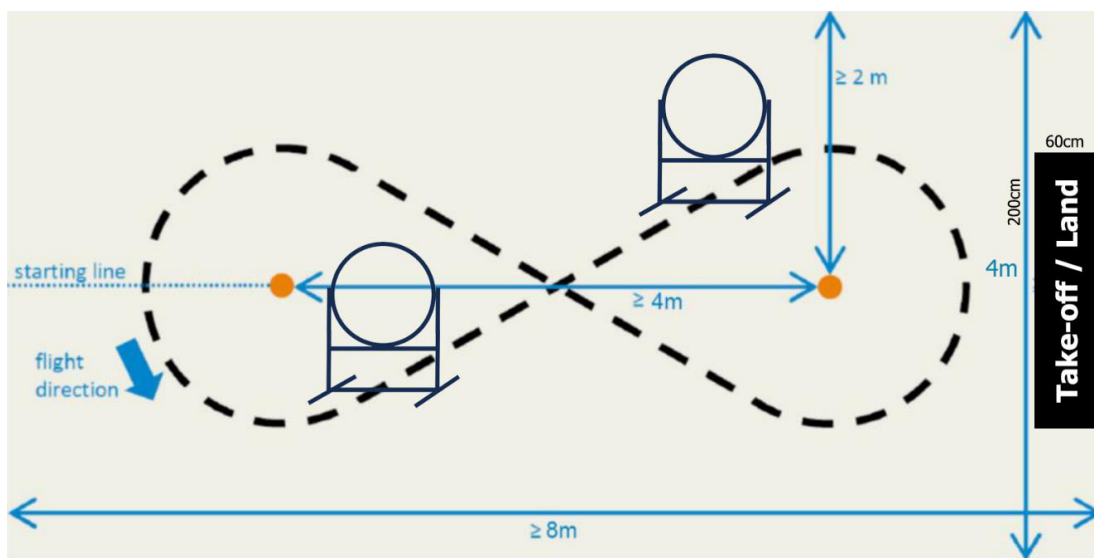

1. One team competes at a time. Each competitor is allowed 2 attempts, with 3 minutes per attempt for timing and scoring. The competitor may take off as many times as needed within the 3-minute period. The referee will select the **best attempt** to determine the final ranking.
2. At the start of an attempt, the competitor must place the drone in the Take-off area (200 x 60 cm), leave the competition field, and wait for the referee's signal before beginning.
3. After the drone takes off, the pilot must remain outside the boundary of the field. If any part of the pilot's body enters the competition area, the referee will stop the attempt. The competitor may walk or run outside the competition field.
5. The competitor must fly the prescribed route continuously for **5 laps** and land in the Landing area within 3 minutes. The referee stops the timer when the drone touches the ground. **No part of the drone may extend beyond the boundary of the Landing area.** Otherwise, a **20-second penalty** will be added.
6. **If the drone falls, crashes, malfunctions, or touches the field net, ring, pole, or other obstacle, the competitor must restart lap counting from the Take-off point. The clock continues running until the full 3 minutes have elapsed.**

7. The battery may be changed during the attempt; however, the clock will continue running until the 3-minute limit is reached.
8. The referee will place 2 obstacle rings, each approximately 80-90 cm in diameter, at designated points along the required flight path.
9. **During the competition, the team controller/coach is not permitted to enter the competition area or provide assistance to the competitor under any circumstances.**
10. If any competitor or team intentionally interferes with an opponent's flight and causes a flight accident, the referee will disqualify that competitor/team from the competition.
11. **For any incident or circumstance arising within the field, all rulings, decisions, and referee discretion are final.**

***** Note: If any competition rules are changed, the organizing committee will notify competitors on the competition day.**

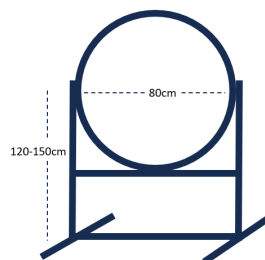

Competition Field Layout

1. The competition field is approximately 4 x 8 meters and is enclosed by safety netting.
2. There are 2 pole locations, and the prescribed flight path forms a figure-eight pattern (shown by the black dashed line).

Top View of the Competition Field and Flight Path

3. There are 2 obstacle rings, each with an inner diameter of approximately 80 cm.

Responsibility

1. Each participating team is responsible for the safety of its own drone and is responsible for any accident caused by a team member or by the team's drone.
2. The organizer shall not be responsible for any incident and/or accident arising from participation in the competition or from the equipment used by a participating team.
